Fresh Fruit and Vegetable Shipments

By Commodities, States, and Months

SEP 27 1982

U.S. DEPT. OF AGRICULTURE
MARKETING SERVICE
WASHINGTON, D.C. 20250

PREFACE

This summary publishes domestic rail and piggyback shipments, available truck and air shipments, and exports of fresh fruits and vegetables by commodities, modes of transportation, origins, and months. Available domestic boat shipments from U.S. possessions and imports from foreign countries are also shown. All amounts are shown in units of 1,000 hundredweight.

Rail and piggyback shipments were reported by rail carriers that issued the initial line-haul revenue waybills. Rail shipments are those moving in refrigerated railcars. Piggyback shipments include those moving in trailer-on-flat-car and container-on-flat-car service.

Truck and air shipments and exports for all commodities and origins are not available. Those obtainable are reported but should not be interpreted as representing complete movements. Arizona and Florida truck data represent interstate movement only. Truck shipments reported from all other States are collected at shipping points and include both interstate and intrastate movements. Air shipments are collected at shipping points. Exports are obtained from various sources, including Federal marketing order administrative committees, Federal-State inspection service, shippers, and transportation agencies.

Information on domestic boat shipments from U.S. possessions was obtained from boat lines at port cities where market news offices are maintained. Data on imports from foreign countries, except Mexico, were obtained from official records of the U.S. Department of Commerce. Mexico data are border crossings secured from records of the Animal and Plant Health Inspection Service of the U.S. Department of Agriculture.

A commodity classification table is shown on page 5. Major items are specifically identified, while minor commodities are grouped together and classified under an appropriate commodity heading. A table of net weights for the most commonly used containers for major commodities is shown on page 6. Container net weights for other commodities shown in this summary, as well as factors used to convert railcars and piggyback vans to weight units, are available upon request.

Tables of total reported domestic shipments and exports, by commodities, months, and modes of transportation, are shown on pages 7, 8, 9, and 10, and by origins, months, and modes of transportation on pages 12 and 13. Imports are shown on pages 11 and 13.

The following abbreviations are used to identify California shipments by districts: Calif North-Northern District, Calif Cent-Central District, Calif South-Southern District, and Calif Imp Vly-Imperial Valley District. Available exports are identified within the initial mode of transportation by abbreviation EXPT following the state of origin.

Cooperation of railroad, air, and steamship agents; members of the produce industry; and officials of State Departments of Agriculture, farmers' markets, and the Animal and Plant Health Inspection Service of the U.S. Department of Agriculture is gratefully acknowledged.
